SUMMARY

Economics graduate student at Johns Hopkins (3.35 GPA) supporting crude oil trading operations at Enbridge where I audit commodity trade data, monitor counterparty credit limits, and build Excel and SQL risk models. Proficient in Python, R, STATA, and MATLAB with applied experience in OLS regression, fixed-effects modeling, and causal inference.

EDUCATION & INVOLVEMENT

Johns Hopkins University (JHU) | M.S. Applied Economics | GPA: 3.57

Aug 2025 – Dec 2027

- Focus: Financial Economics
- JHU Economics Society – Tutor for undergraduate Econometrics, Game Theory, and Microeconomics
- JHU Esports – Consultant and Coach for Johns Hopkins Esports teams

University of Houston (UH) | B.S. Economics & Public Policy | Cum Laude | GPA: 3.5

Aug 2022 – May 2025

- Dean's List (Spring 2024 & 2025) | Quantitative Economics Certificate | Focus: Quantitative Economics & Statistics
- UH Economics Society** – Member & Tutor; guided lectures and workshops on microeconomics and econometrics
- Code [COOGS]** – Peer Mentor; built SQL databases to track organizational finances and mentored peers in quantitative reasoning
- Coog Esports** – Manage team operations and compete in collegiate esports tournaments; secured university funding to cover travel costs

EXPERIENCE

Handshake | *AI Prompt Engineer* | Remote

Oct 2025 – Present

- Create and refine prompts for machine learning models, optimizing output quality and accuracy across diverse use cases
- Evaluate LLM model responses against rubric based accuracy and benchmarks, maintaining 99% accuracy across evaluation cycles
- Leverage AI-assisted research workflows to assess model performance, averaging 85% effectiveness scores on evaluation task
- Identify failure modes in model outputs and engineer targeted prompt revisions to improve consistency and reduce hallucination rates

Enbridge – Tidal Energy Marketing | *Commercial Analyst* | Houston, TX

Mar 2026 – Present

- Audit and reconcile 150+ daily commodity trades across crude oil portfolios, validating risk exposure and mark-to-market P&L
- Build Excel-based risk models and SQL databases to track position valuations, accruals, and deal capture accuracy
- Monitor counterparty credit utilization across 50+ counterparties against approved limits, escalating breaches to management
- Synthesize pricing analytics and exposure data into reports for risk committees and commercial stakeholders

Harris County – Treasury Department | *Financial Analyst* | Houston, TX

Jan 2025 – Apr 2025

- Developed VBA macros to automate financial data reconciliation and variance detection, reducing processing time by 60%
- Monitored fund allocation and budgetary compliance across 60+ Municipal Utility Districts, flagging anomalies for review
- Managed integrity of 100,000+ financial records (1099 forms), ensuring accuracy for year-end reporting and audit readiness

University of Houston | *Undergraduate Research Fellow* | Houston, TX

Apr 2024 – Apr 2025

- Conducted regression analysis on 1M+ data points using R, Excel, and STATA to model labor market risk factors
- Synthesized findings from a literature review of 11 academic papers to propose data-driven policy actions

TECHNICAL PROJECTS

Crude Oil Price Forecasting Model | Python, OLS Regression, HAC Standard Errors

- Built four log-OLS regression models predicting inflation-adjusted crude oil prices (WTI & WCS) segmented by war regime
- Engineered time-varying binary features for geopolitical risk and applied HAC standard errors for robust inference

Portfolio Risk & Performance Tracker | Python, Excel, Yahoo Finance API

- Automated real-time portfolio monitoring via scheduled Python scripts; tracks beta, sector concentration, and risk allocation
- Built trade ledger tracking cost basis, unrealized P&L, and risk-adjusted performance attribution across 9 industries

Economic Policy Impact Simulation | MATLAB → Python (NumPy, Pandas)

- Built macro simulation in MATLAB modeling tax and tariff policy impacts on GDP, GDP per capita, and wealth concentration
- Migrated and extended the model to Python using NumPy and Pandas, adding granular fiscal scenario analysis capabilities

Employment & Crime Causal Analysis | R, Fixed-Effects Regression, AEA Panel Data

- Applied fixed-effects models with clustered standard errors to estimate causal effects of employment on crime rates

SKILLS & CERTIFICATIONS

Technical: Python, R, SQL, VBA, STATA, MATLAB, LaTeX, Excel (Macros, Pivot Tables, VLOOKUP, Solver, Data Tables)

Risk & Analytics: Credit Risk Analysis, Counterparty Exposure, Regression Modeling, Stress Testing, Causal Inference, Variance Analysis

Software: Microsoft Office Suite, Power BI, GitHub, VS Code

Certifications: Quantitative Economics Certificate (UH) | Statistics in Python (DataCamp) | Power BI (LinkedIn) | AI Fluency (Anthropic)
